Introduction

The following conversion table is provided as a reference for ASCII and EBCDIC translation. When moving information (files or data buffers) between EBCDIC machines and ASCII machines it is quite often necessary to convert the information. If the data strings contain only display or printable characters then it is a straightforward, byte-for-byte conversion. However, in the real world the actual conversion of data strings between an ASCII and EBCDIC encoding schema is usually more complicated than a simple byte-for-byte conversion. For example, if the data strings contain packed or binary data or control information then the data conversion becomes content sensitive.

The translation of records or data strings within a file may be an explicitly defined task or it may be done as part of a file transfer process when files are being moved between systems that use a different encoding schema. If a data conversion is done by the file transfer process the data should be reviewed to ensure that special characters (currency symbols, the copyright symbol, the trademark symbol and more) are correctly converted.

For more information about the automated or programmatic conversion between EBCDIC and ASCII refer to the <u>Downloads and Links to Similar Pages</u> at the end of this document.

We have made a significant effort to ensure the documents and software technologies are correct and accurate. We reserve the right to make changes without notice at any time. The function delivered in this version is based upon the enhancement requests from a specific group of users. The intent is to provide changes as the need arises and in a timeframe that is dependent upon the availability of resources.

The ASCII and EBCDIC Tables

The following is the ASCII and EBCDIC translation tables. In addition to the ASCII and EBCDIC values the following tables include the decimal, hexadecimal and binary values.

Special Characters or Symbols

The following tables are provided as a matter of convenience. The symbols are included in the preceding table but may be easier to find in the smaller tables that follow.

Grave-Acute-Circumflex-Umlaut-Tilde

The following table shows the ASCII and EBCDIC values for the alternate symbols of the Acute, Circumflex, Grave, Tilde and Umlaut. The "Courier New (*fixed font*)" and "Times Roman (*proportional font*)" fonts will display the following characters.

| | Acute |) | Cir | cumf | lex | | Grave |) | | Tilde | | U | lmlau | t |
|-----|-------|-----|-----|------|-----|-----|-------|-----|-----|-------|-----|-----|-------|-----|
| Sym | ASC | EBC | Sym | ASC | EBC | Sym | ASC | EBC | Sym | ASC | EBC | Sym | ASC | EBC |
| Á | C1 | 65 | Â | C2 | 62 | À | C0 | 64 | Ã | СЗ | 66 | Ä | C4 | 63 |
| á | E1 | 45 | â | E2 | 42 | à | E0 | 44 | ã | E3 | 46 | ä | E4 | 43 |
| É | C9 | 71 | Ê | CA | 72 | È | C8 | 74 | | | | Ë | СВ | 73 |
| é | E9 | 51 | ê | EA | 52 | è | E8 | 54 | | | | ë | EB | 53 |
| ĺ | CD | 75 | Î | CE | 76 | Ì | СС | 78 | | | | Ϊ | CF | 77 |
| í | ED | 55 | î | EE | 56 | ì | EC | 58 | | | | ï | EF | 57 |
| Ó | D3 | EE | Ô | D4 | EB | Ò | D2 | ED | Õ | D5 | EF | Ö | D6 | EC |
| Ó | F3 | CE | ô | F4 | СВ | Ò | F2 | CD | õ | F5 | CF | Ö | F6 | СС |
| Ú | DA | FE | Û | DB | FB | Ù | D9 | FD | | | | Ü | DC | FC |
| ú | FA | DE | û | FB | DB | ù | F9 | DD | | | | ü | FC | DC |
| Ý | DD | AD | | | | | | | | | | Ϋ | 9F | FF |
| ý | FD | 8D | | | | | | | | | | ÿ | FF | DF |
| | | | | | | | | | Ñ | D1 | 69 | | | |
| | | | | | | | | | ñ | F1 | 49 | | | |

Note: In the preceding table the "Y" character with an umlaut (both upper and lower case characters of \ddot{Y} and \ddot{y}) may affect program logic that is dependent on a High-Values or HEX "FF" content.

Currency Symbols and More

The following table shows the ASCII and EBCDIC values for currency symbols and more of the alternate symbols. The "Courier New (*fixed font*)" and "Times Roman (*proportional font*)" fonts will display the following characters.

| Symbol | ASCII | EBCDIC | Comment |
|--------|--------------|--------------|---------------|
| \$ | x'24' or 036 | x'5B' or 091 | Dollar Sign |
| € | x'80' or 128 | x'20' or 032 | Euro Currency |

www.simotime.com/asc2ebc1.htm 5/9

| 3, 1:54 PM | ASCII or EBCDIC, Translation Tables | | |
|------------|-------------------------------------|--------------|--------------------------------------|
| ¢ | x'A2' or 162 | x'4A' or 074 | US Cent |
| £ | x'A3' or 163 | x'B1' or 177 | Pound |
| ¥ | x'A5' or 165 | x'B2' or 178 | Yen |
| l l | x'A6' or 166 | x'6A' or 106 | Two-Piece Vertical Bar |
| ß | x'DF' or 223 | x'59' or 089 | Strasse, Germany |
| Å | x'C5' or 197 | x'67' or 103 | A-ring |
| å | x'E5' or 229 | x'47' or 071 | a-ring |
| Ç | x'C7' or 199 | x'68' or 104 | letter "C" with cedilla (upper case) |
| Ç | x'E7' or 231 | x'48' or 072 | letter "c" with cedilla (lower case) |
| Ø | x'D8' or 216 | x'80' or 128 | O-slash |
| Ø | x'F8' or 248 | x'70' or 112 | o-slash |
| Æ | x'C6' or 198 | x'9E' or 158 | Diphthong |
| æ | x'E6' or 230 | x'9C' or 156 | Diphthong |
| 7 | x'AC' or 172 | x'5F' or 095 | Logical NOT |
| © | x'89' or 169 | x'B4' or 180 | Copyright |
| ® | x'AE' or 174 | x'AF' or 175 | Registered Trademark |
| XTM | x'99' or 153 | Unknown | Trademark (Superset TM) |
| nn° or | x'B0' or 176 | | Degree Symbol, specify as ° or ° |
| | x'A8' or 168 | | Umlaut |

Note: The ASCII and EBCDIC columns of the preceding table show the two-byte hexadecimal notation or the three-digit numeric value for the symbol.

Copyright & Registered Trademark

The copyright symbol © (a circled "C" Character) may be placed in an HTML document using the © text string. The Registered Trademark symbol ® (a circled "R" Character) may be placed in an HTML document using the ® text string.

Another way to accomplish the task is to use the following.

The copyright symbol © (a circled "C" Character) may be placed in an HTML document using the © text string.

The Registered Trademark symbol ® (a circled "R" Character) may be placed in an HTML document using the ® text string.

Note: The Copyright symbol for ASCII-encoding is 169 or x'89'. The copyright symbol for EBCDIC-encoding is 180 or x'B4'.

Note: The Registered Trademark symbol for ASCII-encoding is 174 or x'AE'. The Registered Trademark symbol for EBCDIC-encoding is 175 or x'AF'.

www.simotime.com/asc2ebc1.htm 6/9

The trademark symbol ™ (a "TM" in superscript) may be placed in an HTML document using the ™ text string.

Another approach would be to use the TM for HTML documents. This would produce the following results - My SymbolTM.

Summary

The purpose of this document is to provide a quick reference for ASCII and EBCDIC translation. This document may be used as a tutorial for new programmers or as a quick reference for experienced programmers.

In the world of programming there are many ways to solve a problem. This documentation and software were developed and tested on systems that are configured for a SIMOTIME environment based on the hardware, operating systems, user requirements and security requirements. Therefore, adjustments may be needed to execute the jobs and programs when transferred to a system of a different architecture or configuration.

SIMOTIME Services has experience in moving or sharing data or application processing across a variety of systems. For additional information about SIMOTIME Services or Technologies please contact us using the information in the Contact, Comment or Feedback section of this document.

Software Agreement and Disclaimer

Permission to use, copy, modify and distribute this software, documentation or training material for any purpose requires a fee to be paid to SimoTime Technologies. Once the fee is received by SimoTime the latest version of the software, documentation or training material will be delivered and a license will be granted for use within an enterprise, provided the SimoTime copyright notice appear on all copies of the software. The SimoTime name or Logo may not be used in any advertising or publicity pertaining to the use of the software without the written permission of SimoTime Technologies.

SimoTime Technologies makes no warranty or representations about the suitability of the software, documentation or learning material for any purpose. It is provided "AS IS" without any expressed or implied warranty, including the implied warranties of merchantability, fitness for a particular purpose and non-infringement. SimoTime Technologies shall not be liable for any direct, indirect, special or consequential damages resulting from the loss of use, data or projects, whether in an action of contract or tort, arising out of or in connection with the use or performance of this software, documentation or training material.

Downloads and Links

This section includes links to documents with additional information that are beyond the scope and purpose of this document. The first group of documents may be available from a local system or via an internet connection, the second group of documents will require an internet connection.

Note: A SimoTime License is required for the items to be made available on a local system or server.

Current Server or Internet Access

The following links may be to the current server or to the Internet.

- Explore the Principles of Data File Conversion. This link includes guidelines for defining requirements and determining the scope of effort for a data conversion effort.
- Explore How to Generate a Data File Convert Program using simple specification statements in a Process Control File (PCF). This link to the User Guide includes the information necessary to create a Process Control File and generate the COBOL programs that will do the actual data file conversion. The User Guide contains a list of the PCF statements that are used for the data file convert process.
- Explore The Binary or COMP format for numeric data strings. This numeric structure is supported by COBOL and may be explicitly defined with the "USAGE IS COMP" or "USAGE IS BINARY" clause.
- Explore The Edited for Display format for numeric data strings. This numeric structure is supported by COBOL and may be used with an edit-mask to prepare the presentation for readability by human beings.
- Explore The Packed-Decimal or COMP-3 format for numeric data strings. This numeric structure is supported by COBOL and may be explicitly defined with the "USAGE IS COMP-3" clause.
- Explore The Zoned-Decimal format for numeric data strings. This numeric structure is the default numeric for COBOL and may be explicitly defined with the "USAGE IS DISPLAY" clause.
- Explore commonly used formats and processing techniques for managing various numeric formats available on the mainframe.

www.simotime.com/asc2ebc1.htm 7/9

Explore the Numbers Connection for additional information about the structure and processing of numeric data items (or numeric fields).

Explore the cycle of converting and transferring non-relational data files between an IBM Mainframe System and a Windows, Linux or UNIX System. This discussion will leverage the non-relational file support provided by Micro Focus for the distributed systems.

Explore a typical data file conversion process that may be required when working in a multi-system environment. This suite of documents describes a model for managing non-relational data structures (Sequential Files and VSAM Data Sets) that contain ASCII or EBCDIC text strings and various numeric formats such as BINARY, PACKED-Decimal and ZONED-Decimal. This model has the capability of creating a test file for an ASCII or EBCDIC encoded environment. This suite of documents will address many of the challenges of doing a record content conversion of a file that will be transferred between an EBCDIC-encoded Mainframe System and an ASCII-encoded Linux, UNIX or Windows System.

Explore The File Status Return Codes that are used to interpret the results of accessing VSAM data sets and/or QSAM files.

Internet Access Required

A good place to start is <u>The SimoTime Home Page</u> for access to white papers, program examples and product information. This link requires an Internet Connection

Explore <u>The Micro Focus Web Site</u> for more information about products (including Micro Focus COBOL) and services available from Micro Focus. This link requires an Internet Connection.

Explore the GnuCOBOL Technologies available from SourceForge. SourceForge is an Open Source community resource dedicated to helping open source projects be as successful as possible. GnuCOBOL (formerly OpenCOBOL) is a COBOL compiler with run time support. The compiler (cobc) translates COBOL source to executable using intermediate C, designated C compiler and linker. This link will require an Internet Connection.

Glossary of Terms

Explore the Glossary of Terms for a list of terms and definitions used in this suite of documents and white papers.

Comments or Feedback

This document was created and is maintained by SimoTime Technologies. If you have any questions, suggestions, comments or feedback please use the following contact information.

- 1. Send an e-mail to our helpdesk.
 - 1.1. helpdesk@simotime.com.
- 2. Our telephone numbers are as follows.
 - 2.1. 1 415 763-9430 office-helpdesk
 - 2.2. 1 415 827-7045 mobile

We appreciate hearing from you.

Company Overview

SimoTime Technologies was founded in 1987 and is a privately owned company. We specialize in the creation and deployment of business applications using new or existing technologies and services. We have a team of individuals that understand the broad range of technologies being used in today's environments. Our customers include small businesses using Internet technologies to corporations using very large mainframe systems.

Quite often, to reach larger markets or provide a higher level of service to existing customers it requires the newer Internet technologies to work in a complementary manner with existing corporate mainframe systems. We specialize in preparing applications and the associated data that are currently residing on a single platform to be distributed across a variety of platforms.

Preparing the application programs will require the transfer of source members that will be compiled and deployed on the target platform. The data will need to be transferred between the systems and may need to be converted and validated at various stages within the process. SimoTime has the technology, services and experience to assist in the application and data management tasks involved with doing business in a multi-system environment.
